We still completely assume that
consciousness is sense and
the unconscious is nonsense.
In science such an assumption
would be laughed out of court.
Do microbes, for instance, make
sense or nonsense?

Our intellect has created a new world that dominates nature, and has populated it with monstrous machines. The latter are so indubitably useful that we cannot see even a possibility of getting rid of them or our subservience to them. Man is bound to follow the adventurous promptings of his scientific and inventive mind and to admire himself for his splendid achievements.
